Levinson, 2014, 1b CFQ 93 0.22 [0.02, 0.41]
Pooled: r = 0.23 [0.17, 0.29], p < .001; robust CI [0.14, 0.32] 0.23 [0.17, 0.29]
Signs flipped where needed so that positive r = higher BCT accuracy with more mindfulness / better wellbeing / better EF.
Polygons: three−level random−effects models (effects nested in samples); robust CI = cluster−robust by sample.
